And the story goes on.....

Animals Killed Every Year

Over 5600 crore farmed animals are killed every year by humans.

These figures do not even include fish & other sea creatures whose deaths are so great they are only measured in tones.

ANIMALS ARE NOT OURS

to experiment or use for entertainment or abuse in any other way.

Facts and Statistics About Animal Testing

Share

Tweet

Each year, more than 100 million animals—including mice, rats, frogs, dogs, cats, rabbits, hamsters, guinea pigs, monkeys, fish, and birds—are killed in U.S. laboratories for biology lessons, medical training, curiosity-driven experimentation, and chemical, drug, food, and cosmetics testing. Before their deaths, some are forced to inhale toxic fumes, others are immobilized in restraint devices for hours, some have holes drilled into their skulls, and others have their skin burned off or their spinal cords crushed. In addition to the torment of the actual experiments, animals in laboratories are deprived of everything that is natural and important to them—they are confined to barren cages, socially isolated, and psychologically traumatized. The thinking, feeling animals who are used in experiments are treated like nothing more than disposable laboratory equipment.

Animal Testing Facts and Figures

United States (2017)^{1,2}

- Almost 1 million animals are held captive in laboratories or used in experiments (excluding rats, mice, birds, reptiles, amphibians, and agricultural animals used in agricultural experiments), plus an estimated 100 million
